

Pollinator Garden

Pollination and Food Production

- LIFEWS AgriShine™ GrowMeal™ Primary 1-3 Teacher Training
- Audience: Primary 1-3 teachers, teaching assistants and garden facilitators
- Format: Self-paced online course + supervised practical orientation
- Recommended duration: 3 hours online + 60-90 minutes garden practical

Course Overview

Learning outcomes, materials and teacher readiness

- Learning outcomes: explain the garden's educational and production purpose; teach the ten course topics accurately; connect practical gardening to Primary 1-3 curriculum; supervise age-appropriate garden work; maintain simple records; assess learning through practical and classroom evidence.
- Core materials: teacher guide, crop/word/number cards as relevant, child-safe hand tools, watering equipment, labels, clipboards, rulers/measuring tools where relevant, observation/record sheets, clean harvest containers, handwashing supplies and first-aid access.
- Completion expectation: complete all modules, demonstrate one safe garden lesson, and submit a short lesson/assessment plan.

TEACHER PRACTICE

- Training sequence: EXPLAIN → DEMONSTRATE → PRACTISE → RECORD → REFLECT.

Introduction to Pollination

Teacher knowledge and practical application

- Explain pollination simply as movement of pollen that helps many flowering plants produce seeds and fruits.
- Use a flower model or diagram before outdoor observation.
- Avoid saying all crops require animal pollinators.
- Connect the concept to familiar flowering food crops.
- Use correct but age-appropriate vocabulary: flower, pollen, pollinator, fruit, seed.

TEACHER PRACTICE

- Prepare a simple flower-and-pollen demonstration.

Flowers and Food Crops

Teacher knowledge and practical application

- Identify flowers on selected garden crops.
- Show that flowers may develop into fruits or seeds in many crops.
- Compare crops grown mainly for leaves with flowering fruit crops.
- Do not pick essential flowers merely for demonstration.
- Record flowering as part of crop observation.

TEACHER PRACTICE

- Select three food crops with clear flowering examples.

Common Pollinators

Teacher knowledge and practical application

- Introduce locally relevant bees, butterflies, some beetles, flies or other common visitors.
- Use photographs to support identification.
- Explain that not every insect visiting a plant is pollinating at that moment.
- Avoid catching or handling pollinators.
- Build observation vocabulary around body movement and flower visits.

TEACHER PRACTICE

- Prepare picture cards for common local pollinators.

Plant-Pollinator Relationships

Teacher knowledge and practical application

- Observe which flowers receive visitors and what the visitors do.
- Explain that flowers can provide nectar or pollen while pollinators move between flowers.
- Avoid claiming preference from one short observation.
- Compare visitor activity at different flowers as a simple inquiry.
- Connect successful pollination to food production where appropriate.

TEACHER PRACTICE

- Prepare a short flower-visitor observation sheet.

Pollinator Habitats

Teacher knowledge and practical application

- Discuss food, shelter, water and suitable plant diversity as habitat needs.
- Use flowering plants across different times where feasible.
- Keep some habitat features while maintaining safe school pathways.
- Avoid introducing invasive or unsuitable species.
- Explain that habitat care is part of garden management.

TEACHER PRACTICE

- Identify three habitat features in the garden.

Safe Insect Observation

Teacher knowledge and practical application

- Watch from a respectful distance and remain calm.
- Do not swat, trap or handle pollinators.
- Know school allergy and sting procedures before the lesson.
- Keep pupils away from nests or hives unless managed by qualified personnel.
- Stop observation if insects become defensive or conditions are unsafe.

TEACHER PRACTICE

- Practice a quiet observation routine.

Maintaining Pollinator Plants

Teacher knowledge and practical application

- Water and weed without damaging flowers unnecessarily.
- Replace failed plants with approved suitable species.
- Avoid pesticide use during pupil activities; any pest-control decisions follow school/garden protocols.
- Record flowering periods.
- Keep paths clear while preserving intended habitat areas.

TEACHER PRACTICE

- Prepare a simple maintenance calendar.

Pollination Activities

Teacher knowledge and practical application

- Use flower-part models, pollen-transfer simulations with safe craft materials, visitor counts and flower observation.
- Clarify when an activity is a model rather than real pollination.
- Ask pupils to predict, observe and discuss.
- Avoid touching live pollinators.
- Connect the activity back to actual crops.

TEACHER PRACTICE

- Choose one model and one observation activity.

Biodiversity in the Garden

Teacher knowledge and practical application

- Introduce biodiversity as variety of living things in simple terms.
- Observe different plants and garden visitors.
- Explain that diversity can support many ecological functions without promising a specific outcome from one garden.
- Record different observed organisms without disturbing them.
- Encourage respect for organisms that are not immediately useful to people.

TEACHER PRACTICE

- Create a simple garden biodiversity tally.

Assessment

Teacher knowledge and practical application

- Assess pollination vocabulary, flower-crop connections, safe observation and ability to describe a plant-pollinator interaction.
- Use diagrams, oral explanations and garden observations.
- Do not assess by requiring live insects to be present.
- Check that pupils distinguish observation from inference.
- Revisit concepts during flowering and harvest.

TEACHER PRACTICE

- Completion task: design a 35-minute Pollinator Garden lesson.
