

FRAME FOR PERFORMANCE

SSS 1-3 | Advanced Production Garden

Frame and execute a research or engineering mission on advanced production efficiency. Produce quantitative evidence that can support a design or management decision.

MISSION KIT production records, instruments, calculator

EVIDENCE yield component, harvest index or efficiency evidence

GM-401 - MISSION PATH

- DO** 1. Frame objective and performance metric. 2. Define system boundary, assumptions and constraints. 3. Frame with production records, instruments, calculator. 4. Quantify uncertainty and quality-control checks. 5. Model/compare scenarios where appropriate. 6. Validate, evaluate and recommend.
- PROVE** Provide a traceable dataset, calculation/model/diagram, validation or QC note, and decision statement for yield component, harvest index or efficiency evidence.
- SUCCESS** The method is reproducible, assumptions are explicit, uncertainty is addressed, and the recommendation is technically defensible.
- SAFETY** Use documented methods. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Propose one optimization or next-stage prototype/test for the Advanced Production Garden, including a measurable acceptance criterion.

ADVANCED RESEARCH MISSION

SSS 1-3 | Advanced Production Garden

Frame and execute a research or engineering mission on advanced production efficiency. Produce quantitative evidence that can support a design or management decision.

MISSION KIT production records, instruments, calculator

EVIDENCE yield component, harvest index or efficiency evidence

GM-402 - MISSION PATH

- DO** 1. Frame objective and performance metric. 2. Define system boundary, assumptions and constraints. 3. Design with production records, instruments, calculator. 4. Quantify uncertainty and quality-control checks. 5. Model/compare scenarios where appropriate. 6. Validate, evaluate and recommend.
- PROVE** Provide a traceable dataset, calculation/model/diagram, validation or QC note, and decision statement for yield component, harvest index or efficiency evidence.
- SUCCESS** The method is reproducible, assumptions are explicit, uncertainty is addressed, and the recommendation is technically defensible.
- SAFETY** Use documented methods. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Propose one optimization or next-stage prototype/test for the Advanced Production Garden, including a measurable acceptance criterion.

INSTRUMENT THE DESIGN

SSS 1-3 | Advanced Production Garden

Frame and execute a research or engineering mission on advanced production efficiency. Produce quantitative evidence that can support a design or management decision.

MISSION KIT production records, instruments, calculator

EVIDENCE yield component, harvest index or efficiency evidence

GM-403 - MISSION PATH

- DO** 1. Frame objective and performance metric. 2. Define system boundary, assumptions and constraints. 3. Instrument with production records, instruments, calculator. 4. Quantify uncertainty and quality-control checks. 5. Model/compare scenarios where appropriate. 6. Validate, evaluate and recommend.
- PROVE** Provide a traceable dataset, calculation/model/diagram, validation or QC note, and decision statement for yield component, harvest index or efficiency evidence.
- SUCCESS** The method is reproducible, assumptions are explicit, uncertainty is addressed, and the recommendation is technically defensible.
- SAFETY** Use documented methods. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Propose one optimization or next-stage prototype/test for the Advanced Production Garden, including a measurable acceptance criterion.

CALIBRATE FOR PERFORMANCE

SSS 1-3 | Advanced Production Garden

Frame and execute a research or engineering mission on advanced production efficiency. Produce quantitative evidence that can support a design or management decision.

MISSION KIT production records, instruments, calculator

EVIDENCE yield component, harvest index or efficiency evidence

GM-404 - MISSION PATH

- DO** 1. Frame objective and performance metric. 2. Define system boundary, assumptions and constraints. 3. Calibrate with production records, instruments, calculator. 4. Quantify uncertainty and quality-control checks. 5. Model/compare scenarios where appropriate. 6. Validate, evaluate and recommend.
- PROVE** Provide a traceable dataset, calculation/model/diagram, validation or QC note, and decision statement for yield component, harvest index or efficiency evidence.
- SUCCESS** The method is reproducible, assumptions are explicit, uncertainty is addressed, and the recommendation is technically defensible.
- SAFETY** Use documented methods. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Propose one optimization or next-stage prototype/test for the Advanced Production Garden, including a measurable acceptance criterion.

ADVANCED RESEARCH MISSION

SSS 1-3 | Advanced Production Garden

Frame and execute a research or engineering mission on advanced production efficiency. Produce quantitative evidence that can support a design or management decision.

MISSION KIT production records, instruments, calculator

EVIDENCE yield component, harvest index or efficiency evidence

GM-405 - MISSION PATH

- DO** 1. Frame objective and performance metric. 2. Define system boundary, assumptions and constraints. 3. Model with production records, instruments, calculator. 4. Quantify uncertainty and quality-control checks. 5. Model/compare scenarios where appropriate. 6. Validate, evaluate and recommend.
- PROVE** Provide a traceable dataset, calculation/model/diagram, validation or QC note, and decision statement for yield component, harvest index or efficiency evidence.
- SUCCESS** The method is reproducible, assumptions are explicit, uncertainty is addressed, and the recommendation is technically defensible.
- SAFETY** Use documented methods. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Propose one optimization or next-stage prototype/test for the Advanced Production Garden, including a measurable acceptance criterion.

VALIDATE THE DESIGN

SSS 1-3 | Advanced Production Garden

Frame and execute a research or engineering mission on advanced production efficiency. Produce quantitative evidence that can support a design or management decision.

MISSION KIT production records, instruments, calculator

EVIDENCE yield component, harvest index or efficiency evidence

GM-406 - MISSION PATH

- DO** 1. Frame objective and performance metric. 2. Define system boundary, assumptions and constraints. 3. Validate with production records, instruments, calculator. 4. Quantify uncertainty and quality-control checks. 5. Model/compare scenarios where appropriate. 6. Validate, evaluate and recommend.
- PROVE** Provide a traceable dataset, calculation/model/diagram, validation or QC note, and decision statement for yield component, harvest index or efficiency evidence.
- SUCCESS** The method is reproducible, assumptions are explicit, uncertainty is addressed, and the recommendation is technically defensible.
- SAFETY** Use documented methods. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Propose one optimization or next-stage prototype/test for the Advanced Production Garden, including a measurable acceptance criterion.

EVALUATE FOR PERFORMANCE

SSS 1-3 | Advanced Production Garden

Frame and execute a research or engineering mission on advanced production efficiency. Produce quantitative evidence that can support a design or management decision.

MISSION KIT production records, instruments, calculator

EVIDENCE yield component, harvest index or efficiency evidence

GM-407 - MISSION PATH

- DO** 1. Frame objective and performance metric. 2. Define system boundary, assumptions and constraints. 3. Evaluate with production records, instruments, calculator. 4. Quantify uncertainty and quality-control checks. 5. Model/compare scenarios where appropriate. 6. Validate, evaluate and recommend.
- PROVE** Provide a traceable dataset, calculation/model/diagram, validation or QC note, and decision statement for yield component, harvest index or efficiency evidence.
- SUCCESS** The method is reproducible, assumptions are explicit, uncertainty is addressed, and the recommendation is technically defensible.
- SAFETY** Use documented methods. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Propose one optimization or next-stage prototype/test for the Advanced Production Garden, including a measurable acceptance criterion.

ADVANCED RESEARCH MISSION

SSS 1-3 | Advanced Production Garden

Frame and execute a research or engineering mission on advanced production efficiency. Produce quantitative evidence that can support a design or management decision.

MISSION KIT production records, instruments, calculator

EVIDENCE yield component, harvest index or efficiency evidence

GM-408 - MISSION PATH

- DO** 1. Frame objective and performance metric. 2. Define system boundary, assumptions and constraints. 3. Optimize with production records, instruments, calculator. 4. Quantify uncertainty and quality-control checks. 5. Model/compare scenarios where appropriate. 6. Validate, evaluate and recommend.
- PROVE** Provide a traceable dataset, calculation/model/diagram, validation or QC note, and decision statement for yield component, harvest index or efficiency evidence.
- SUCCESS** The method is reproducible, assumptions are explicit, uncertainty is addressed, and the recommendation is technically defensible.
- SAFETY** Use documented methods. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Propose one optimization or next-stage prototype/test for the Advanced Production Garden, including a measurable acceptance criterion.

STRESS-TEST THE DESIGN

SSS 1-3 | Advanced Production Garden

Frame and execute a research or engineering mission on advanced production efficiency. Produce quantitative evidence that can support a design or management decision.

MISSION KIT production records, instruments, calculator

EVIDENCE yield component, harvest index or efficiency evidence

GM-409 - MISSION PATH

- DO** 1. Frame objective and performance metric. 2. Define system boundary, assumptions and constraints. 3. Stress-test with production records, instruments, calculator. 4. Quantify uncertainty and quality-control checks. 5. Model/compare scenarios where appropriate. 6. Validate, evaluate and recommend.
- PROVE** Provide a traceable dataset, calculation/model/diagram, validation or QC note, and decision statement for yield component, harvest index or efficiency evidence.
- SUCCESS** The method is reproducible, assumptions are explicit, uncertainty is addressed, and the recommendation is technically defensible.
- SAFETY** Use documented methods. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Propose one optimization or next-stage prototype/test for the Advanced Production Garden, including a measurable acceptance criterion.

RECOMMEND FOR PERFORMANCE

SSS 1-3 | Advanced Production Garden

Frame and execute a research or engineering mission on advanced production efficiency. Produce quantitative evidence that can support a design or management decision.

MISSION KIT production records, instruments, calculator

EVIDENCE yield component, harvest index or efficiency evidence

GM-410 - MISSION PATH

- DO** 1. Frame objective and performance metric. 2. Define system boundary, assumptions and constraints. 3. Recommend with production records, instruments, calculator. 4. Quantify uncertainty and quality-control checks. 5. Model/compare scenarios where appropriate. 6. Validate, evaluate and recommend.
- PROVE** Provide a traceable dataset, calculation/model/diagram, validation or QC note, and decision statement for yield component, harvest index or efficiency evidence.
- SUCCESS** The method is reproducible, assumptions are explicit, uncertainty is addressed, and the recommendation is technically defensible.
- SAFETY** Use documented methods. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Propose one optimization or next-stage prototype/test for the Advanced Production Garden, including a measurable acceptance criterion.
