

SSS 1-3 Controlled Experiment Garden Flashcards 841-860

841. CAUSAL QUESTION	A controlled experiment is designed to estimate whether deliberately changing a ...
842. FACTOR	A factor is an explanatory variable deliberately varied across two or more treat...
843. FACTOR LEVEL	A factor level is a specific setting or category of the experimental factor.
844. FACTORIAL DESIGN	A factorial design evaluates two or more factors and their combinations within t...
845. MAIN EFFECT	A main effect is the average effect of changing one factor across levels of othe...
846. INTERACTION	An interaction occurs when the effect of one factor changes depending on the lev...
847. NEGATIVE CONTROL	A negative control is expected not to produce the tested response and helps reve...
848. POSITIVE CONTROL	A positive control is expected to produce a known response and helps verify that...
849. CONFOUNDING	Confounding occurs when the effect of a treatment cannot be separated from anoth...
850. BIAS	Bias is systematic error that shifts measurements, selection, treatment applicat...
851. BLIND MEASUREMENT	Blinding hides treatment identity from the measurer when feasible to reduce obse...
852. CALIBRATION	Instrument calibration links measured output to accepted reference values before...
853. REPEATABILITY	Repeatability describes agreement among repeated measurements made under the sam...
854. REPRODUCIBILITY	Reproducibility concerns whether a method or finding can be obtained again under...
855. QUALITY CONTROL	Quality control procedures detect and prevent errors during treatment applicatio...
856. DATA EXCLUSION RULE	A data-exclusion rule should be defined using objective criteria and not invente...
857. UNCERTAINTY	Measurement and experimental uncertainty describe limits on the precision and in...
858. SENSITIVITY ANALYSIS	Sensitivity analysis examines how conclusions change when assumptions, parameter...
859. INTERNAL VALIDITY	Internal validity concerns whether observed differences can credibly be attribut...
860. CONTROLLED EXPERIMENT EVALUATION	Conclusion integrates design, controls, bias, measurement quality, uncertainty, ...
