

SSS 1-3 Irrigation Engineering Garden Flashcards 861-880

861. IRRIGATION SYSTEM	An irrigation system stores, conveys, controls, distributes, and applies water t...
862. DESIGN FLOW RATE	Design flow rate is the water discharge the system must deliver under specified ...
863. PRESSURE	Pressure is force per unit area and provides hydraulic energy for water movement...
864. STATIC HEAD	Static head is the elevation-related pressure potential between two points when ...
865. DYNAMIC HEAD	Dynamic head accounts for elevation, pressure requirements, and energy losses wh...
866. FRICTION LOSS	Friction loss is hydraulic energy lost as water moves through pipes, fittings, v...
867. PIPE DIAMETER	Pipe diameter influences velocity, friction loss, cost, and allowable system flow.
868. WATER VELOCITY	Water velocity is flow rate divided by pipe cross-sectional area and affects fri...
869. VALVE	Valves isolate, regulate, or direct flow and are selected according to hydraulic...
870. FILTER	Filtration protects emitters and small passages from particles that can cause bl...
871. PRESSURE REGULATOR	A pressure regulator maintains downstream pressure near a target range despite a...
872. EMITTER DISCHARGE	Emitter discharge is the volume of water released per unit time at an outlet und...
873. EMITTER VARIATION	Emitter-flow variation reveals nonuniform delivery caused by pressure difference...
874. DISTRIBUTION UNIFORMITY	Distribution uniformity quantifies how evenly irrigation water is delivered acro...
875. APPLICATION DEPTH	Application depth converts delivered water volume into an equivalent depth over ...
876. IRRIGATION SET TIME	Set time is the operating duration needed to apply a target irrigation depth at ...
877. PUMP POWER	Pump power demand depends on water flow, total head, fluid properties, and pump-...
878. PUMP EFFICIENCY	Pump efficiency compares useful hydraulic power delivered to water with input po...
879. SYSTEM CURVE	A system curve represents the head required by a piping system across different ...
880. IRRIGATION DESIGN REVIEW	Engineering review checks demand, flow, pressure, losses, uniformity, runtime, p...
