

DEFINE & TEST

JSS 1-3 | Raised Systems Garden

Use scientific investigation to define a question about raised-bed system performance. Quantify the response and defend a recommendation.

MISSION KIT bed, ruler, moisture method

EVIDENCE volume, moisture, infiltration or productivity evidence

GM-311 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Define with bed, ruler, moisture method. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for volume, moisture, infiltration or productivity evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Protect bed structure. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Raised Systems Garden, including the evidence that triggers the decision.

RAISED SCIENCE MISSION

JSS 1-3 | Raised Systems Garden

Use scientific investigation to hypothesize a question about raised-bed system performance. Quantify the response and defend a recommendation.

MISSION KIT bed, ruler, moisture method

EVIDENCE volume, moisture, infiltration or productivity evidence

GM-312 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Hypothesize with bed, ruler, moisture method. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for volume, moisture, infiltration or productivity evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Protect bed structure. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Raised Systems Garden, including the evidence that triggers the decision.

DESIGN THE EVIDENCE

JSS 1-3 | Raised Systems Garden

Use scientific investigation to design a question about raised-bed system performance. Quantify the response and defend a recommendation.

MISSION KIT bed, ruler, moisture method

EVIDENCE volume, moisture, infiltration or productivity evidence

GM-313 - MISSION PATH

DO 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Design with bed, ruler, moisture method. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.

PROVE Submit the experimental layout, raw-data table, calculation/graph and conclusion for volume, moisture, infiltration or productivity evidence.

SUCCESS Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.

SAFETY Protect bed structure. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Raised Systems Garden, including the evidence that triggers the decision.

REPLICATE & TEST

JSS 1-3 | Raised Systems Garden

Use scientific investigation to replicate a question about raised-bed system performance. Quantify the response and defend a recommendation.

MISSION KIT bed, ruler, moisture method

EVIDENCE volume, moisture, infiltration or productivity evidence

GM-314 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Replicate with bed, ruler, moisture method. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for volume, moisture, infiltration or productivity evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Protect bed structure. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Raised Systems Garden, including the evidence that triggers the decision.

RAISED SCIENCE MISSION

JSS 1-3 | Raised Systems Garden

Use scientific investigation to quantify a question about raised-bed system performance. Quantify the response and defend a recommendation.

MISSION KIT bed, ruler, moisture method

EVIDENCE volume, moisture, infiltration or productivity evidence

GM-315 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Quantify with bed, ruler, moisture method. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for volume, moisture, infiltration or productivity evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Protect bed structure. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Raised Systems Garden, including the evidence that triggers the decision.

ANALYZE THE EVIDENCE

JSS 1-3 | Raised Systems Garden

Use scientific investigation to analyze a question about raised-bed system performance. Quantify the response and defend a recommendation.

MISSION KIT bed, ruler, moisture method

EVIDENCE volume, moisture, infiltration or productivity evidence

GM-316 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Analyze with bed, ruler, moisture method. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for volume, moisture, infiltration or productivity evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Protect bed structure. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Raised Systems Garden, including the evidence that triggers the decision.

DIAGNOSE & TEST

JSS 1-3 | Raised Systems Garden

Use scientific investigation to diagnose a question about raised-bed system performance. Quantify the response and defend a recommendation.

MISSION KIT bed, ruler, moisture method

EVIDENCE volume, moisture, infiltration or productivity evidence

GM-317 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Diagnose with bed, ruler, moisture method. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for volume, moisture, infiltration or productivity evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Protect bed structure. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Raised Systems Garden, including the evidence that triggers the decision.

RAISED SCIENCE MISSION

JSS 1-3 | Raised Systems Garden

Use scientific investigation to model a question about raised-bed system performance. Quantify the response and defend a recommendation.

MISSION KIT bed, ruler, moisture method

EVIDENCE volume, moisture, infiltration or productivity evidence

GM-318 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Model with bed, ruler, moisture method. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for volume, moisture, infiltration or productivity evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Protect bed structure. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Raised Systems Garden, including the evidence that triggers the decision.

EVALUATE THE EVIDENCE

JSS 1-3 | Raised Systems Garden

Use scientific investigation to evaluate a question about raised-bed system performance. Quantify the response and defend a recommendation.

MISSION KIT bed, ruler, moisture method

EVIDENCE volume, moisture, infiltration or productivity evidence

GM-319 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Evaluate with bed, ruler, moisture method. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for volume, moisture, infiltration or productivity evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Protect bed structure. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Raised Systems Garden, including the evidence that triggers the decision.

RECOMMEND & TEST

JSS 1-3 | Raised Systems Garden

Use scientific investigation to recommend a question about raised-bed system performance. Quantify the response and defend a recommendation.

MISSION KIT bed, ruler, moisture method

EVIDENCE volume, moisture, infiltration or productivity evidence

GM-320 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Recommend with bed, ruler, moisture method. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for volume, moisture, infiltration or productivity evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Protect bed structure. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Raised Systems Garden, including the evidence that triggers the decision.
