

DEFINE & TEST

JSS 1-3 | Intercropping Garden

Use scientific investigation to define a question about two-crop interactions. Quantify the response and defend a recommendation.

MISSION KIT crop samples, ruler, harvest records

EVIDENCE density, canopy, component yield or LER evidence

GM-341 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Define with crop samples, ruler, harvest records. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for density, canopy, component yield or LER evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Keep crop components separate in records. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Intercropping Garden, including the evidence that triggers the decision.

INTERCROPPING SCIENCE MISSION

JSS 1-3 | Intercropping Garden

Use scientific investigation to hypothesize a question about two-crop interactions. Quantify the response and defend a recommendation.

MISSION KIT crop samples, ruler, harvest records

EVIDENCE density, canopy, component yield or LER evidence

GM-342 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Hypothesize with crop samples, ruler, harvest records. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for density, canopy, component yield or LER evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Keep crop components separate in records. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Intercropping Garden, including the evidence that triggers the decision.

DESIGN THE EVIDENCE

JSS 1-3 | Intercropping Garden

Use scientific investigation to design a question about two-crop interactions. Quantify the response and defend a recommendation.

MISSION KIT crop samples, ruler, harvest records

EVIDENCE density, canopy, component yield or LER evidence

GM-343 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Design with crop samples, ruler, harvest records. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for density, canopy, component yield or LER evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Keep crop components separate in records. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Intercropping Garden, including the evidence that triggers the decision.

REPLICATE & TEST

JSS 1-3 | Intercropping Garden

Use scientific investigation to replicate a question about two-crop interactions. Quantify the response and defend a recommendation.

MISSION KIT crop samples, ruler, harvest records

EVIDENCE density, canopy, component yield or LER evidence

GM-344 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Replicate with crop samples, ruler, harvest records. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for density, canopy, component yield or LER evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Keep crop components separate in records. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Intercropping Garden, including the evidence that triggers the decision.

INTERCROPPING SCIENCE MISSION

JSS 1-3 | Intercropping Garden

Use scientific investigation to quantify a question about two-crop interactions. Quantify the response and defend a recommendation.

MISSION KIT crop samples, ruler, harvest records

EVIDENCE density, canopy, component yield or LER evidence

GM-345 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Quantify with crop samples, ruler, harvest records. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for density, canopy, component yield or LER evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Keep crop components separate in records. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Intercropping Garden, including the evidence that triggers the decision.

ANALYZE THE EVIDENCE

JSS 1-3 | Intercropping Garden

Use scientific investigation to analyze a question about two-crop interactions. Quantify the response and defend a recommendation.

MISSION KIT crop samples, ruler, harvest records

EVIDENCE density, canopy, component yield or LER evidence

GM-346 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Analyze with crop samples, ruler, harvest records. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for density, canopy, component yield or LER evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Keep crop components separate in records. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Intercropping Garden, including the evidence that triggers the decision.

DIAGNOSE & TEST

JSS 1-3 | Intercropping Garden

Use scientific investigation to diagnose a question about two-crop interactions. Quantify the response and defend a recommendation.

MISSION KIT crop samples, ruler, harvest records

EVIDENCE density, canopy, component yield or LER evidence

GM-347 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Diagnose with crop samples, ruler, harvest records. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for density, canopy, component yield or LER evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Keep crop components separate in records. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Intercropping Garden, including the evidence that triggers the decision.

INTERCROPPING SCIENCE MISSION

JSS 1-3 | Intercropping Garden

Use scientific investigation to model a question about two-crop interactions. Quantify the response and defend a recommendation.

MISSION KIT crop samples, ruler, harvest records

EVIDENCE density, canopy, component yield or LER evidence

GM-348 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Model with crop samples, ruler, harvest records. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for density, canopy, component yield or LER evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Keep crop components separate in records. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Intercropping Garden, including the evidence that triggers the decision.

EVALUATE THE EVIDENCE

JSS 1-3 | Intercropping Garden

Use scientific investigation to evaluate a question about two-crop interactions. Quantify the response and defend a recommendation.

MISSION KIT crop samples, ruler, harvest records

EVIDENCE density, canopy, component yield or LER evidence

GM-349 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Evaluate with crop samples, ruler, harvest records. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for density, canopy, component yield or LER evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Keep crop components separate in records. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Intercropping Garden, including the evidence that triggers the decision.

RECOMMEND & TEST

JSS 1-3 | Intercropping Garden

Use scientific investigation to recommend a question about two-crop interactions. Quantify the response and defend a recommendation.

MISSION KIT crop samples, ruler, harvest records

EVIDENCE density, canopy, component yield or LER evidence

GM-350 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Recommend with crop samples, ruler, harvest records. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for density, canopy, component yield or LER evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Keep crop components separate in records. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Intercropping Garden, including the evidence that triggers the decision.
