

JSS 1-3 Applied Systems Garden Flashcards 781-800

781. SYSTEM BOUNDARY	A system boundary defines what components and processes are included in an analy...
782. SYSTEM COMPONENT	Components are interacting physical, biological, informational, and human elemen...
783. INPUT	System inputs are resources or information entering the defined boundary.
784. PROCESS	Processes transform, move, store, or regulate materials, energy, information, an...
785. OUTPUT	Outputs are products, wastes, measurements, or effects leaving the system boundary.
786. STOCK	A stock is a quantity stored within the system, such as water in a tank, nutrien...
787. FLOW	A flow is the rate at which a material or resource enters, leaves, or moves betw...
788. FEEDBACK	Feedback occurs when information about system condition influences a later actio...
789. CONSTRAINT	A constraint limits system performance, choices, or resource availability.
790. TRADE-OFF	A trade-off occurs when improving one objective can reduce performance in another.
791. SYNERGY	A synergy occurs when one action produces benefits for multiple system objectives.
792. EFFICIENCY	Efficiency compares useful output with the resources supplied or losses avoided ...
793. PRODUCTIVITY	Productivity relates useful production to land, water, labor, time, or another r...
794. RELIABILITY	Reliability describes the ability of a system to perform its required function c...
795. RESILIENCE	Resilience is the capacity of a system to withstand, adapt to, and recover from ...
796. MONITORING	Monitoring provides observations and measurements needed to understand current s...
797. DECISION RULE	A decision rule converts measurements or observations into a defined management ...
798. SCENARIO	A scenario is a structured description of possible conditions used to test how a...
799. SYSTEM PERFORMANCE	System performance is evaluated with multiple indicators because no single metri...
800. APPLIED SYSTEMS MANAGEMENT	Applied systems management uses boundaries, measurements, feedback, trade-offs, ...
