

DEFINE & TEST

JSS 1-3 | Production Garden

Use scientific investigation to define a question about crop production performance. Quantify the response and defend a recommendation.

MISSION KIT plot records, measuring tools

EVIDENCE establishment, growth, yield or input-use evidence

GM-301 - MISSION PATH

DO 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Define with plot records, measuring tools. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.

PROVE Submit the experimental layout, raw-data table, calculation/graph and conclusion for establishment, growth, yield or input-use evidence.

SUCCESS Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.

SAFETY Follow field-tool safety. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Production Garden, including the evidence that triggers the decision.

PRODUCTION SCIENCE MISSION

JSS 1-3 | Production Garden

Use scientific investigation to hypothesize a question about crop production performance. Quantify the response and defend a recommendation.

MISSION KIT plot records, measuring tools

EVIDENCE establishment, growth, yield or input-use evidence

GM-302 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Hypothesize with plot records, measuring tools. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for establishment, growth, yield or input-use evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Follow field-tool safety. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Production Garden, including the evidence that triggers the decision.

DESIGN THE EVIDENCE

JSS 1-3 | Production Garden

Use scientific investigation to design a question about crop production performance. Quantify the response and defend a recommendation.

MISSION KIT plot records, measuring tools

EVIDENCE establishment, growth, yield or input-use evidence

GM-303 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Design with plot records, measuring tools. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for establishment, growth, yield or input-use evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Follow field-tool safety. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Production Garden, including the evidence that triggers the decision.

REPLICATE & TEST

JSS 1-3 | Production Garden

Use scientific investigation to replicate a question about crop production performance. Quantify the response and defend a recommendation.

MISSION KIT plot records, measuring tools

EVIDENCE establishment, growth, yield or input-use evidence

GM-304 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Replicate with plot records, measuring tools. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for establishment, growth, yield or input-use evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Follow field-tool safety. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Production Garden, including the evidence that triggers the decision.

PRODUCTION SCIENCE MISSION

JSS 1-3 | Production Garden

Use scientific investigation to quantify a question about crop production performance. Quantify the response and defend a recommendation.

MISSION KIT plot records, measuring tools

EVIDENCE establishment, growth, yield or input-use evidence

GM-305 - MISSION PATH

DO 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Quantify with plot records, measuring tools. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.

PROVE Submit the experimental layout, raw-data table, calculation/graph and conclusion for establishment, growth, yield or input-use evidence.

SUCCESS Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.

SAFETY Follow field-tool safety. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Production Garden, including the evidence that triggers the decision.

ANALYZE THE EVIDENCE

JSS 1-3 | Production Garden

Use scientific investigation to analyze a question about crop production performance. Quantify the response and defend a recommendation.

MISSION KIT plot records, measuring tools

EVIDENCE establishment, growth, yield or input-use evidence

GM-306 - MISSION PATH

DO 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Analyze with plot records, measuring tools. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.

PROVE Submit the experimental layout, raw-data table, calculation/graph and conclusion for establishment, growth, yield or input-use evidence.

SUCCESS Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.

SAFETY Follow field-tool safety. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Production Garden, including the evidence that triggers the decision.

DIAGNOSE & TEST

JSS 1-3 | Production Garden

Use scientific investigation to diagnose a question about crop production performance. Quantify the response and defend a recommendation.

MISSION KIT plot records, measuring tools

EVIDENCE establishment, growth, yield or input-use evidence

GM-307 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Diagnose with plot records, measuring tools. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for establishment, growth, yield or input-use evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Follow field-tool safety. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Production Garden, including the evidence that triggers the decision.

PRODUCTION SCIENCE MISSION

JSS 1-3 | Production Garden

Use scientific investigation to model a question about crop production performance. Quantify the response and defend a recommendation.

MISSION KIT plot records, measuring tools

EVIDENCE establishment, growth, yield or input-use evidence

GM-308 - MISSION PATH

DO 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Model with plot records, measuring tools. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.

PROVE Submit the experimental layout, raw-data table, calculation/graph and conclusion for establishment, growth, yield or input-use evidence.

SUCCESS Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.

SAFETY Follow field-tool safety. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Production Garden, including the evidence that triggers the decision.

EVALUATE THE EVIDENCE

JSS 1-3 | Production Garden

Use scientific investigation to evaluate a question about crop production performance. Quantify the response and defend a recommendation.

MISSION KIT plot records, measuring tools

EVIDENCE establishment, growth, yield or input-use evidence

GM-309 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Evaluate with plot records, measuring tools. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for establishment, growth, yield or input-use evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Follow field-tool safety. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Production Garden, including the evidence that triggers the decision.

RECOMMEND & TEST

JSS 1-3 | Production Garden

Use scientific investigation to recommend a question about crop production performance. Quantify the response and defend a recommendation.

MISSION KIT plot records, measuring tools

EVIDENCE establishment, growth, yield or input-use evidence

GM-310 - MISSION PATH

DO 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Recommend with plot records, measuring tools. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.

PROVE Submit the experimental layout, raw-data table, calculation/graph and conclusion for establishment, growth, yield or input-use evidence.

SUCCESS Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.

SAFETY Follow field-tool safety. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Production Garden, including the evidence that triggers the decision.

DEFINE & TEST

JSS 1-3 | Raised Systems Garden

Use scientific investigation to define a question about raised-bed system performance. Quantify the response and defend a recommendation.

MISSION KIT bed, ruler, moisture method

EVIDENCE volume, moisture, infiltration or productivity evidence

GM-311 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Define with bed, ruler, moisture method. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for volume, moisture, infiltration or productivity evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Protect bed structure. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Raised Systems Garden, including the evidence that triggers the decision.

RAISED SCIENCE MISSION

JSS 1-3 | Raised Systems Garden

Use scientific investigation to hypothesize a question about raised-bed system performance. Quantify the response and defend a recommendation.

MISSION KIT bed, ruler, moisture method

EVIDENCE volume, moisture, infiltration or productivity evidence

GM-312 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Hypothesize with bed, ruler, moisture method. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for volume, moisture, infiltration or productivity evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Protect bed structure. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Raised Systems Garden, including the evidence that triggers the decision.

DESIGN THE EVIDENCE

JSS 1-3 | Raised Systems Garden

Use scientific investigation to design a question about raised-bed system performance. Quantify the response and defend a recommendation.

MISSION KIT bed, ruler, moisture method

EVIDENCE volume, moisture, infiltration or productivity evidence

GM-313 - MISSION PATH

DO 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Design with bed, ruler, moisture method. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.

PROVE Submit the experimental layout, raw-data table, calculation/graph and conclusion for volume, moisture, infiltration or productivity evidence.

SUCCESS Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.

SAFETY Protect bed structure. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Raised Systems Garden, including the evidence that triggers the decision.

REPLICATE & TEST

JSS 1-3 | Raised Systems Garden

Use scientific investigation to replicate a question about raised-bed system performance. Quantify the response and defend a recommendation.

MISSION KIT bed, ruler, moisture method

EVIDENCE volume, moisture, infiltration or productivity evidence

GM-314 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Replicate with bed, ruler, moisture method. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for volume, moisture, infiltration or productivity evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Protect bed structure. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Raised Systems Garden, including the evidence that triggers the decision.

RAISED SCIENCE MISSION

JSS 1-3 | Raised Systems Garden

Use scientific investigation to quantify a question about raised-bed system performance. Quantify the response and defend a recommendation.

MISSION KIT bed, ruler, moisture method

EVIDENCE volume, moisture, infiltration or productivity evidence

GM-315 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Quantify with bed, ruler, moisture method. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for volume, moisture, infiltration or productivity evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Protect bed structure. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Raised Systems Garden, including the evidence that triggers the decision.

ANALYZE THE EVIDENCE

JSS 1-3 | Raised Systems Garden

Use scientific investigation to analyze a question about raised-bed system performance. Quantify the response and defend a recommendation.

MISSION KIT bed, ruler, moisture method

EVIDENCE volume, moisture, infiltration or productivity evidence

GM-316 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Analyze with bed, ruler, moisture method. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for volume, moisture, infiltration or productivity evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Protect bed structure. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Raised Systems Garden, including the evidence that triggers the decision.

DIAGNOSE & TEST

JSS 1-3 | Raised Systems Garden

Use scientific investigation to diagnose a question about raised-bed system performance. Quantify the response and defend a recommendation.

MISSION KIT bed, ruler, moisture method

EVIDENCE volume, moisture, infiltration or productivity evidence

GM-317 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Diagnose with bed, ruler, moisture method. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for volume, moisture, infiltration or productivity evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Protect bed structure. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Raised Systems Garden, including the evidence that triggers the decision.

RAISED SCIENCE MISSION

JSS 1-3 | Raised Systems Garden

Use scientific investigation to model a question about raised-bed system performance. Quantify the response and defend a recommendation.

MISSION KIT bed, ruler, moisture method

EVIDENCE volume, moisture, infiltration or productivity evidence

GM-318 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Model with bed, ruler, moisture method. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for volume, moisture, infiltration or productivity evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Protect bed structure. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Raised Systems Garden, including the evidence that triggers the decision.

EVALUATE THE EVIDENCE

JSS 1-3 | Raised Systems Garden

Use scientific investigation to evaluate a question about raised-bed system performance. Quantify the response and defend a recommendation.

MISSION KIT bed, ruler, moisture method

EVIDENCE volume, moisture, infiltration or productivity evidence

GM-319 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Evaluate with bed, ruler, moisture method. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for volume, moisture, infiltration or productivity evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Protect bed structure. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Raised Systems Garden, including the evidence that triggers the decision.

RECOMMEND & TEST

JSS 1-3 | Raised Systems Garden

Use scientific investigation to recommend a question about raised-bed system performance. Quantify the response and defend a recommendation.

MISSION KIT bed, ruler, moisture method

EVIDENCE volume, moisture, infiltration or productivity evidence

GM-320 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Recommend with bed, ruler, moisture method. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for volume, moisture, infiltration or productivity evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Protect bed structure. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Raised Systems Garden, including the evidence that triggers the decision.

DEFINE & TEST

JSS 1-3 | Grid Experiment Garden

Use scientific investigation to define a question about controlled garden comparisons. Quantify the response and defend a recommendation.

MISSION KIT grid labels, ruler, data sheet

EVIDENCE treatment/control response

GM-321 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Define with grid labels, ruler, data sheet. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for treatment/control response.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Keep treatments identifiable. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Grid Experiment Garden, including the evidence that triggers the decision.

GRID SCIENCE MISSION

JSS 1-3 | Grid Experiment Garden

Use scientific investigation to hypothesize a question about controlled garden comparisons. Quantify the response and defend a recommendation.

MISSION KIT grid labels, ruler, data sheet

EVIDENCE treatment/control response

GM-322 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Hypothesize with grid labels, ruler, data sheet. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for treatment/control response.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Keep treatments identifiable. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Grid Experiment Garden, including the evidence that triggers the decision.

DESIGN THE EVIDENCE

JSS 1-3 | Grid Experiment Garden

Use scientific investigation to design a question about controlled garden comparisons. Quantify the response and defend a recommendation.

MISSION KIT grid labels, ruler, data sheet

EVIDENCE treatment/control response

GM-323 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Design with grid labels, ruler, data sheet. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for treatment/control response.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Keep treatments identifiable. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Grid Experiment Garden, including the evidence that triggers the decision.

REPLICATE & TEST

JSS 1-3 | Grid Experiment Garden

Use scientific investigation to replicate a question about controlled garden comparisons. Quantify the response and defend a recommendation.

MISSION KIT grid labels, ruler, data sheet

EVIDENCE treatment/control response

GM-324 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Replicate with grid labels, ruler, data sheet. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for treatment/control response.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Keep treatments identifiable. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Grid Experiment Garden, including the evidence that triggers the decision.

GRID SCIENCE MISSION

JSS 1-3 | Grid Experiment Garden

Use scientific investigation to quantify a question about controlled garden comparisons. Quantify the response and defend a recommendation.

MISSION KIT grid labels, ruler, data sheet

EVIDENCE treatment/control response

GM-325 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Quantify with grid labels, ruler, data sheet. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for treatment/control response.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Keep treatments identifiable. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Grid Experiment Garden, including the evidence that triggers the decision.

ANALYZE THE EVIDENCE

JSS 1-3 | Grid Experiment Garden

Use scientific investigation to analyze a question about controlled garden comparisons. Quantify the response and defend a recommendation.

MISSION KIT grid labels, ruler, data sheet

EVIDENCE treatment/control response

GM-326 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Analyze with grid labels, ruler, data sheet. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for treatment/control response.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Keep treatments identifiable. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Grid Experiment Garden, including the evidence that triggers the decision.

DIAGNOSE & TEST

JSS 1-3 | Grid Experiment Garden

Use scientific investigation to diagnose a question about controlled garden comparisons. Quantify the response and defend a recommendation.

MISSION KIT grid labels, ruler, data sheet

EVIDENCE treatment/control response

GM-327 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Diagnose with grid labels, ruler, data sheet. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for treatment/control response.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Keep treatments identifiable. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Grid Experiment Garden, including the evidence that triggers the decision.

GRID SCIENCE MISSION

JSS 1-3 | Grid Experiment Garden

Use scientific investigation to model a question about controlled garden comparisons. Quantify the response and defend a recommendation.

MISSION KIT grid labels, ruler, data sheet

EVIDENCE treatment/control response

GM-328 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Model with grid labels, ruler, data sheet. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for treatment/control response.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Keep treatments identifiable. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Grid Experiment Garden, including the evidence that triggers the decision.

EVALUATE THE EVIDENCE

JSS 1-3 | Grid Experiment Garden

Use scientific investigation to evaluate a question about controlled garden comparisons. Quantify the response and defend a recommendation.

MISSION KIT grid labels, ruler, data sheet

EVIDENCE treatment/control response

GM-329 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Evaluate with grid labels, ruler, data sheet. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for treatment/control response.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Keep treatments identifiable. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Grid Experiment Garden, including the evidence that triggers the decision.

RECOMMEND & TEST

JSS 1-3 | Grid Experiment Garden

Use scientific investigation to recommend a question about controlled garden comparisons. Quantify the response and defend a recommendation.

MISSION KIT grid labels, ruler, data sheet

EVIDENCE treatment/control response

GM-330 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Recommend with grid labels, ruler, data sheet. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for treatment/control response.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Keep treatments identifiable. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Grid Experiment Garden, including the evidence that triggers the decision.

DEFINE & TEST

JSS 1-3 | Crop Rotation Garden

Use scientific investigation to define a question about rotation planning and soil-cover logic. Quantify the response and defend a recommendation.

MISSION KIT bed history, crop-family records

EVIDENCE family sequence, interval or cover evidence

GM-331 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Define with bed history, crop-family records. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for family sequence, interval or cover evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Document prior crops correctly. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Crop Rotation Garden, including the evidence that triggers the decision.

CROP SCIENCE MISSION

JSS 1-3 | Crop Rotation Garden

Use scientific investigation to hypothesize a question about rotation planning and soil-cover logic. Quantify the response and defend a recommendation.

MISSION KIT bed history, crop-family records

EVIDENCE family sequence, interval or cover evidence

GM-332 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Hypothesize with bed history, crop-family records. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for family sequence, interval or cover evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Document prior crops correctly. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Crop Rotation Garden, including the evidence that triggers the decision.

DESIGN THE EVIDENCE

JSS 1-3 | Crop Rotation Garden

Use scientific investigation to design a question about rotation planning and soil-cover logic. Quantify the response and defend a recommendation.

MISSION KIT bed history, crop-family records

EVIDENCE family sequence, interval or cover evidence

GM-333 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Design with bed history, crop-family records. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for family sequence, interval or cover evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Document prior crops correctly. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Crop Rotation Garden, including the evidence that triggers the decision.

REPLICATE & TEST

JSS 1-3 | Crop Rotation Garden

Use scientific investigation to replicate a question about rotation planning and soil-cover logic. Quantify the response and defend a recommendation.

MISSION KIT bed history, crop-family records

EVIDENCE family sequence, interval or cover evidence

GM-334 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Replicate with bed history, crop-family records. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for family sequence, interval or cover evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Document prior crops correctly. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Crop Rotation Garden, including the evidence that triggers the decision.

CROP SCIENCE MISSION

JSS 1-3 | Crop Rotation Garden

Use scientific investigation to quantify a question about rotation planning and soil-cover logic. Quantify the response and defend a recommendation.

MISSION KIT bed history, crop-family records

EVIDENCE family sequence, interval or cover evidence

GM-335 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Quantify with bed history, crop-family records. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for family sequence, interval or cover evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Document prior crops correctly. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Crop Rotation Garden, including the evidence that triggers the decision.

ANALYZE THE EVIDENCE

JSS 1-3 | Crop Rotation Garden

Use scientific investigation to analyze a question about rotation planning and soil-cover logic. Quantify the response and defend a recommendation.

MISSION KIT bed history, crop-family records

EVIDENCE family sequence, interval or cover evidence

GM-336 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Analyze with bed history, crop-family records. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for family sequence, interval or cover evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Document prior crops correctly. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Crop Rotation Garden, including the evidence that triggers the decision.

DIAGNOSE & TEST

JSS 1-3 | Crop Rotation Garden

Use scientific investigation to diagnose a question about rotation planning and soil-cover logic. Quantify the response and defend a recommendation.

MISSION KIT bed history, crop-family records

EVIDENCE family sequence, interval or cover evidence

GM-337 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Diagnose with bed history, crop-family records. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for family sequence, interval or cover evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Document prior crops correctly. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Crop Rotation Garden, including the evidence that triggers the decision.

CROP SCIENCE MISSION

JSS 1-3 | Crop Rotation Garden

Use scientific investigation to model a question about rotation planning and soil-cover logic. Quantify the response and defend a recommendation.

MISSION KIT bed history, crop-family records

EVIDENCE family sequence, interval or cover evidence

GM-338 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Model with bed history, crop-family records. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for family sequence, interval or cover evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Document prior crops correctly. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Crop Rotation Garden, including the evidence that triggers the decision.

EVALUATE THE EVIDENCE

JSS 1-3 | Crop Rotation Garden

Use scientific investigation to evaluate a question about rotation planning and soil-cover logic. Quantify the response and defend a recommendation.

MISSION KIT bed history, crop-family records

EVIDENCE family sequence, interval or cover evidence

GM-339 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Evaluate with bed history, crop-family records. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for family sequence, interval or cover evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Document prior crops correctly. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Crop Rotation Garden, including the evidence that triggers the decision.

RECOMMEND & TEST

JSS 1-3 | Crop Rotation Garden

Use scientific investigation to recommend a question about rotation planning and soil-cover logic. Quantify the response and defend a recommendation.

MISSION KIT bed history, crop-family records

EVIDENCE family sequence, interval or cover evidence

GM-340 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Recommend with bed history, crop-family records. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for family sequence, interval or cover evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Document prior crops correctly. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Crop Rotation Garden, including the evidence that triggers the decision.

DEFINE & TEST

JSS 1-3 | Intercropping Garden

Use scientific investigation to define a question about two-crop interactions. Quantify the response and defend a recommendation.

MISSION KIT crop samples, ruler, harvest records

EVIDENCE density, canopy, component yield or LER evidence

GM-341 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Define with crop samples, ruler, harvest records. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for density, canopy, component yield or LER evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Keep crop components separate in records. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Intercropping Garden, including the evidence that triggers the decision.

INTERCROPPING SCIENCE MISSION

JSS 1-3 | Intercropping Garden

Use scientific investigation to hypothesize a question about two-crop interactions. Quantify the response and defend a recommendation.

MISSION KIT crop samples, ruler, harvest records

EVIDENCE density, canopy, component yield or LER evidence

GM-342 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Hypothesize with crop samples, ruler, harvest records. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for density, canopy, component yield or LER evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Keep crop components separate in records. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Intercropping Garden, including the evidence that triggers the decision.

DESIGN THE EVIDENCE

JSS 1-3 | Intercropping Garden

Use scientific investigation to design a question about two-crop interactions. Quantify the response and defend a recommendation.

MISSION KIT crop samples, ruler, harvest records

EVIDENCE density, canopy, component yield or LER evidence

GM-343 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Design with crop samples, ruler, harvest records. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for density, canopy, component yield or LER evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Keep crop components separate in records. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Intercropping Garden, including the evidence that triggers the decision.

REPLICATE & TEST

JSS 1-3 | Intercropping Garden

Use scientific investigation to replicate a question about two-crop interactions. Quantify the response and defend a recommendation.

MISSION KIT crop samples, ruler, harvest records

EVIDENCE density, canopy, component yield or LER evidence

GM-344 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Replicate with crop samples, ruler, harvest records. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for density, canopy, component yield or LER evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Keep crop components separate in records. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Intercropping Garden, including the evidence that triggers the decision.

INTERCROPPING SCIENCE MISSION

JSS 1-3 | Intercropping Garden

Use scientific investigation to quantify a question about two-crop interactions. Quantify the response and defend a recommendation.

MISSION KIT crop samples, ruler, harvest records

EVIDENCE density, canopy, component yield or LER evidence

GM-345 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Quantify with crop samples, ruler, harvest records. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for density, canopy, component yield or LER evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Keep crop components separate in records. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Intercropping Garden, including the evidence that triggers the decision.

ANALYZE THE EVIDENCE

JSS 1-3 | Intercropping Garden

Use scientific investigation to analyze a question about two-crop interactions. Quantify the response and defend a recommendation.

MISSION KIT crop samples, ruler, harvest records

EVIDENCE density, canopy, component yield or LER evidence

GM-346 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Analyze with crop samples, ruler, harvest records. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for density, canopy, component yield or LER evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Keep crop components separate in records. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Intercropping Garden, including the evidence that triggers the decision.

DIAGNOSE & TEST

JSS 1-3 | Intercropping Garden

Use scientific investigation to diagnose a question about two-crop interactions. Quantify the response and defend a recommendation.

MISSION KIT crop samples, ruler, harvest records

EVIDENCE density, canopy, component yield or LER evidence

GM-347 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Diagnose with crop samples, ruler, harvest records. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for density, canopy, component yield or LER evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Keep crop components separate in records. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Intercropping Garden, including the evidence that triggers the decision.

INTERCROPPING SCIENCE MISSION

JSS 1-3 | Intercropping Garden

Use scientific investigation to model a question about two-crop interactions. Quantify the response and defend a recommendation.

MISSION KIT crop samples, ruler, harvest records

EVIDENCE density, canopy, component yield or LER evidence

GM-348 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Model with crop samples, ruler, harvest records. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for density, canopy, component yield or LER evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Keep crop components separate in records. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Intercropping Garden, including the evidence that triggers the decision.

EVALUATE THE EVIDENCE

JSS 1-3 | Intercropping Garden

Use scientific investigation to evaluate a question about two-crop interactions. Quantify the response and defend a recommendation.

MISSION KIT crop samples, ruler, harvest records

EVIDENCE density, canopy, component yield or LER evidence

GM-349 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Evaluate with crop samples, ruler, harvest records. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for density, canopy, component yield or LER evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Keep crop components separate in records. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Intercropping Garden, including the evidence that triggers the decision.

RECOMMEND & TEST

JSS 1-3 | Intercropping Garden

Use scientific investigation to recommend a question about two-crop interactions. Quantify the response and defend a recommendation.

MISSION KIT crop samples, ruler, harvest records

EVIDENCE density, canopy, component yield or LER evidence

GM-350 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Recommend with crop samples, ruler, harvest records. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for density, canopy, component yield or LER evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Keep crop components separate in records. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Intercropping Garden, including the evidence that triggers the decision.

DEFINE & TEST

JSS 1-3 | Water-Smart Garden

Use scientific investigation to define a question about water movement and productivity. Quantify the response and defend a recommendation.

MISSION KIT measuring container, timer, ruler

EVIDENCE infiltration, applied water, runoff or productivity evidence

GM-351 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Define with measuring container, timer, ruler. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for infiltration, applied water, runoff or productivity evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Avoid slippery wet areas. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Water-Smart Garden, including the evidence that triggers the decision.

WATER-SMART SCIENCE MISSION

JSS 1-3 | Water-Smart Garden

Use scientific investigation to hypothesize a question about water movement and productivity. Quantify the response and defend a recommendation.

MISSION KIT measuring container, timer, ruler

EVIDENCE infiltration, applied water, runoff or productivity evidence

GM-352 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Hypothesize with measuring container, timer, ruler. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for infiltration, applied water, runoff or productivity evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Avoid slippery wet areas. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Water-Smart Garden, including the evidence that triggers the decision.

DESIGN THE EVIDENCE

JSS 1-3 | Water-Smart Garden

Use scientific investigation to design a question about water movement and productivity. Quantify the response and defend a recommendation.

MISSION KIT measuring container, timer, ruler

EVIDENCE infiltration, applied water, runoff or productivity evidence

GM-353 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Design with measuring container, timer, ruler. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for infiltration, applied water, runoff or productivity evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Avoid slippery wet areas. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Water-Smart Garden, including the evidence that triggers the decision.

REPLICATE & TEST

JSS 1-3 | Water-Smart Garden

Use scientific investigation to replicate a question about water movement and productivity. Quantify the response and defend a recommendation.

MISSION KIT measuring container, timer, ruler

EVIDENCE infiltration, applied water, runoff or productivity evidence

GM-354 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Replicate with measuring container, timer, ruler. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for infiltration, applied water, runoff or productivity evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Avoid slippery wet areas. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Water-Smart Garden, including the evidence that triggers the decision.

WATER-SMART SCIENCE MISSION

JSS 1-3 | Water-Smart Garden

Use scientific investigation to quantify a question about water movement and productivity. Quantify the response and defend a recommendation.

MISSION KIT measuring container, timer, ruler

EVIDENCE infiltration, applied water, runoff or productivity evidence

GM-355 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Quantify with measuring container, timer, ruler. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for infiltration, applied water, runoff or productivity evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Avoid slippery wet areas. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Water-Smart Garden, including the evidence that triggers the decision.

ANALYZE THE EVIDENCE

JSS 1-3 | Water-Smart Garden

Use scientific investigation to analyze a question about water movement and productivity. Quantify the response and defend a recommendation.

MISSION KIT measuring container, timer, ruler

EVIDENCE infiltration, applied water, runoff or productivity evidence

GM-356 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Analyze with measuring container, timer, ruler. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for infiltration, applied water, runoff or productivity evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Avoid slippery wet areas. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Water-Smart Garden, including the evidence that triggers the decision.

DIAGNOSE & TEST

JSS 1-3 | Water-Smart Garden

Use scientific investigation to diagnose a question about water movement and productivity. Quantify the response and defend a recommendation.

MISSION KIT measuring container, timer, ruler

EVIDENCE infiltration, applied water, runoff or productivity evidence

GM-357 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Diagnose with measuring container, timer, ruler. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for infiltration, applied water, runoff or productivity evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Avoid slippery wet areas. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Water-Smart Garden, including the evidence that triggers the decision.

WATER-SMART SCIENCE MISSION

JSS 1-3 | Water-Smart Garden

Use scientific investigation to model a question about water movement and productivity. Quantify the response and defend a recommendation.

MISSION KIT measuring container, timer, ruler

EVIDENCE infiltration, applied water, runoff or productivity evidence

GM-358 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Model with measuring container, timer, ruler. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for infiltration, applied water, runoff or productivity evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Avoid slippery wet areas. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Water-Smart Garden, including the evidence that triggers the decision.

EVALUATE THE EVIDENCE

JSS 1-3 | Water-Smart Garden

Use scientific investigation to evaluate a question about water movement and productivity. Quantify the response and defend a recommendation.

MISSION KIT measuring container, timer, ruler

EVIDENCE infiltration, applied water, runoff or productivity evidence

GM-359 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Evaluate with measuring container, timer, ruler. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for infiltration, applied water, runoff or productivity evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Avoid slippery wet areas. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Water-Smart Garden, including the evidence that triggers the decision.

RECOMMEND & TEST

JSS 1-3 | Water-Smart Garden

Use scientific investigation to recommend a question about water movement and productivity. Quantify the response and defend a recommendation.

MISSION KIT measuring container, timer, ruler

EVIDENCE infiltration, applied water, runoff or productivity evidence

GM-360 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Recommend with measuring container, timer, ruler. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for infiltration, applied water, runoff or productivity evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Avoid slippery wet areas. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Water-Smart Garden, including the evidence that triggers the decision.

DEFINE & TEST

JSS 1-3 | Compost & Soil Garden

Use scientific investigation to define a question about compost-soil processes. Quantify the response and defend a recommendation.

MISSION KIT compost records, soil observations

EVIDENCE temperature, moisture, volume, maturity or soil response

GM-361 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Define with compost records, soil observations. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for temperature, moisture, volume, maturity or soil response.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Use mature compost only where instructed. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Compost & Soil Garden, including the evidence that triggers the decision.

COMPOST SCIENCE MISSION

JSS 1-3 | Compost & Soil Garden

Use scientific investigation to hypothesize a question about compost-soil processes. Quantify the response and defend a recommendation.

MISSION KIT compost records, soil observations

EVIDENCE temperature, moisture, volume, maturity or soil response

GM-362 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Hypothesize with compost records, soil observations. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for temperature, moisture, volume, maturity or soil response.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Use mature compost only where instructed. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Compost & Soil Garden, including the evidence that triggers the decision.

DESIGN THE EVIDENCE

JSS 1-3 | Compost & Soil Garden

Use scientific investigation to design a question about compost-soil processes. Quantify the response and defend a recommendation.

MISSION KIT compost records, soil observations

EVIDENCE temperature, moisture, volume, maturity or soil response

GM-363 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Design with compost records, soil observations. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for temperature, moisture, volume, maturity or soil response.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Use mature compost only where instructed. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Compost & Soil Garden, including the evidence that triggers the decision.

REPLICATE & TEST

JSS 1-3 | Compost & Soil Garden

Use scientific investigation to replicate a question about compost-soil processes. Quantify the response and defend a recommendation.

MISSION KIT compost records, soil observations

EVIDENCE temperature, moisture, volume, maturity or soil response

GM-364 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Replicate with compost records, soil observations. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for temperature, moisture, volume, maturity or soil response.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Use mature compost only where instructed. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Compost & Soil Garden, including the evidence that triggers the decision.

COMPOST SCIENCE MISSION

JSS 1-3 | Compost & Soil Garden

Use scientific investigation to quantify a question about compost-soil processes. Quantify the response and defend a recommendation.

MISSION KIT compost records, soil observations

EVIDENCE temperature, moisture, volume, maturity or soil response

GM-365 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Quantify with compost records, soil observations. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for temperature, moisture, volume, maturity or soil response.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Use mature compost only where instructed. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Compost & Soil Garden, including the evidence that triggers the decision.

ANALYZE THE EVIDENCE

JSS 1-3 | Compost & Soil Garden

Use scientific investigation to analyze a question about compost-soil processes. Quantify the response and defend a recommendation.

MISSION KIT compost records, soil observations

EVIDENCE temperature, moisture, volume, maturity or soil response

GM-366 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Analyze with compost records, soil observations. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for temperature, moisture, volume, maturity or soil response.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Use mature compost only where instructed. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Compost & Soil Garden, including the evidence that triggers the decision.

DIAGNOSE & TEST

JSS 1-3 | Compost & Soil Garden

Use scientific investigation to diagnose a question about compost-soil processes. Quantify the response and defend a recommendation.

MISSION KIT compost records, soil observations

EVIDENCE temperature, moisture, volume, maturity or soil response

GM-367 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Diagnose with compost records, soil observations. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for temperature, moisture, volume, maturity or soil response.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Use mature compost only where instructed. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Compost & Soil Garden, including the evidence that triggers the decision.

COMPOST SCIENCE MISSION

JSS 1-3 | Compost & Soil Garden

Use scientific investigation to model a question about compost-soil processes. Quantify the response and defend a recommendation.

MISSION KIT compost records, soil observations

EVIDENCE temperature, moisture, volume, maturity or soil response

GM-368 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Model with compost records, soil observations. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for temperature, moisture, volume, maturity or soil response.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Use mature compost only where instructed. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Compost & Soil Garden, including the evidence that triggers the decision.

EVALUATE THE EVIDENCE

JSS 1-3 | Compost & Soil Garden

Use scientific investigation to evaluate a question about compost-soil processes. Quantify the response and defend a recommendation.

MISSION KIT compost records, soil observations

EVIDENCE temperature, moisture, volume, maturity or soil response

GM-369 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Evaluate with compost records, soil observations. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for temperature, moisture, volume, maturity or soil response.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Use mature compost only where instructed. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Compost & Soil Garden, including the evidence that triggers the decision.

RECOMMEND & TEST

JSS 1-3 | Compost & Soil Garden

Use scientific investigation to recommend a question about compost-soil processes. Quantify the response and defend a recommendation.

MISSION KIT compost records, soil observations

EVIDENCE temperature, moisture, volume, maturity or soil response

GM-370 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Recommend with compost records, soil observations. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for temperature, moisture, volume, maturity or soil response.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Use mature compost only where instructed. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Compost & Soil Garden, including the evidence that triggers the decision.

DEFINE & TEST

JSS 1-3 | Soilless Learning Garden

Use scientific investigation to define a question about recirculating soilless operation. Quantify the response and defend a recommendation.

MISSION KIT system map, pH/EC/flow tools

EVIDENCE solution, flow or root-zone evidence

GM-371 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Define with system map, pH/EC/flow tools. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for solution, flow or root-zone evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Teacher supervises solution measurements. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Soilless Learning Garden, including the evidence that triggers the decision.

SOILLESS SCIENCE MISSION

JSS 1-3 | Soilless Learning Garden

Use scientific investigation to hypothesize a question about recirculating soilless operation. Quantify the response and defend a recommendation.

MISSION KIT system map, pH/EC/flow tools

EVIDENCE solution, flow or root-zone evidence

GM-372 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Hypothesize with system map, pH/EC/flow tools. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for solution, flow or root-zone evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Teacher supervises solution measurements. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Soilless Learning Garden, including the evidence that triggers the decision.

DESIGN THE EVIDENCE

JSS 1-3 | Soilless Learning Garden

Use scientific investigation to design a question about recirculating soilless operation. Quantify the response and defend a recommendation.

MISSION KIT system map, pH/EC/flow tools

EVIDENCE solution, flow or root-zone evidence

GM-373 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Design with system map, pH/EC/flow tools. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for solution, flow or root-zone evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Teacher supervises solution measurements. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Soilless Learning Garden, including the evidence that triggers the decision.

REPLICATE & TEST

JSS 1-3 | Soilless Learning Garden

Use scientific investigation to replicate a question about recirculating soilless operation. Quantify the response and defend a recommendation.

MISSION KIT system map, pH/EC/flow tools

EVIDENCE solution, flow or root-zone evidence

GM-374 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Replicate with system map, pH/EC/flow tools. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for solution, flow or root-zone evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Teacher supervises solution measurements. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Soilless Learning Garden, including the evidence that triggers the decision.

SOILLESS SCIENCE MISSION

JSS 1-3 | Soilless Learning Garden

Use scientific investigation to quantify a question about recirculating soilless operation. Quantify the response and defend a recommendation.

MISSION KIT system map, pH/EC/flow tools

EVIDENCE solution, flow or root-zone evidence

GM-375 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Quantify with system map, pH/EC/flow tools. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for solution, flow or root-zone evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Teacher supervises solution measurements. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Soilless Learning Garden, including the evidence that triggers the decision.

ANALYZE THE EVIDENCE

JSS 1-3 | Soilless Learning Garden

Use scientific investigation to analyze a question about recirculating soilless operation. Quantify the response and defend a recommendation.

MISSION KIT system map, pH/EC/flow tools

EVIDENCE solution, flow or root-zone evidence

GM-376 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Analyze with system map, pH/EC/flow tools. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for solution, flow or root-zone evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Teacher supervises solution measurements. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Soilless Learning Garden, including the evidence that triggers the decision.

DIAGNOSE & TEST

JSS 1-3 | Soilless Learning Garden

Use scientific investigation to diagnose a question about recirculating soilless operation. Quantify the response and defend a recommendation.

MISSION KIT system map, pH/EC/flow tools

EVIDENCE solution, flow or root-zone evidence

GM-377 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Diagnose with system map, pH/EC/flow tools. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for solution, flow or root-zone evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Teacher supervises solution measurements. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Soilless Learning Garden, including the evidence that triggers the decision.

SOILLESS SCIENCE MISSION

JSS 1-3 | Soilless Learning Garden

Use scientific investigation to model a question about recirculating soilless operation. Quantify the response and defend a recommendation.

MISSION KIT system map, pH/EC/flow tools

EVIDENCE solution, flow or root-zone evidence

GM-378 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Model with system map, pH/EC/flow tools. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for solution, flow or root-zone evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Teacher supervises solution measurements. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Soilless Learning Garden, including the evidence that triggers the decision.

EVALUATE THE EVIDENCE

JSS 1-3 | Soilless Learning Garden

Use scientific investigation to evaluate a question about recirculating soilless operation. Quantify the response and defend a recommendation.

MISSION KIT system map, pH/EC/flow tools

EVIDENCE solution, flow or root-zone evidence

GM-379 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Evaluate with system map, pH/EC/flow tools. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for solution, flow or root-zone evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Teacher supervises solution measurements. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Soilless Learning Garden, including the evidence that triggers the decision.

RECOMMEND & TEST

JSS 1-3 | Soilless Learning Garden

Use scientific investigation to recommend a question about recirculating soilless operation. Quantify the response and defend a recommendation.

MISSION KIT system map, pH/EC/flow tools

EVIDENCE solution, flow or root-zone evidence

GM-380 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Recommend with system map, pH/EC/flow tools. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for solution, flow or root-zone evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Teacher supervises solution measurements. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Soilless Learning Garden, including the evidence that triggers the decision.

DEFINE & TEST

JSS 1-3 | Sensor-Ready Garden

Use scientific investigation to define a question about sensor measurement quality. Quantify the response and defend a recommendation.

MISSION KIT sensor, reference method, data sheet

EVIDENCE repeatability, error, placement or drift evidence

GM-381 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Define with sensor, reference method, data sheet. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for repeatability, error, placement or drift evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Protect sensors and cables. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Sensor-Ready Garden, including the evidence that triggers the decision.

SENSOR-READY SCIENCE MISSION

JSS 1-3 | Sensor-Ready Garden

Use scientific investigation to hypothesize a question about sensor measurement quality. Quantify the response and defend a recommendation.

MISSION KIT sensor, reference method, data sheet

EVIDENCE repeatability, error, placement or drift evidence

GM-382 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Hypothesize with sensor, reference method, data sheet. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for repeatability, error, placement or drift evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Protect sensors and cables. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Sensor-Ready Garden, including the evidence that triggers the decision.

DESIGN THE EVIDENCE

JSS 1-3 | Sensor-Ready Garden

Use scientific investigation to design a question about sensor measurement quality. Quantify the response and defend a recommendation.

MISSION KIT sensor, reference method, data sheet

EVIDENCE repeatability, error, placement or drift evidence

GM-383 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Design with sensor, reference method, data sheet. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for repeatability, error, placement or drift evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Protect sensors and cables. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Sensor-Ready Garden, including the evidence that triggers the decision.

REPLICATE & TEST

JSS 1-3 | Sensor-Ready Garden

Use scientific investigation to replicate a question about sensor measurement quality. Quantify the response and defend a recommendation.

MISSION KIT sensor, reference method, data sheet

EVIDENCE repeatability, error, placement or drift evidence

GM-384 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Replicate with sensor, reference method, data sheet. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for repeatability, error, placement or drift evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Protect sensors and cables. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Sensor-Ready Garden, including the evidence that triggers the decision.

SENSOR-READY SCIENCE MISSION

JSS 1-3 | Sensor-Ready Garden

Use scientific investigation to quantify a question about sensor measurement quality. Quantify the response and defend a recommendation.

MISSION KIT sensor, reference method, data sheet

EVIDENCE repeatability, error, placement or drift evidence

GM-385 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Quantify with sensor, reference method, data sheet. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for repeatability, error, placement or drift evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Protect sensors and cables. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Sensor-Ready Garden, including the evidence that triggers the decision.

ANALYZE THE EVIDENCE

JSS 1-3 | Sensor-Ready Garden

Use scientific investigation to analyze a question about sensor measurement quality. Quantify the response and defend a recommendation.

MISSION KIT sensor, reference method, data sheet

EVIDENCE repeatability, error, placement or drift evidence

GM-386 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Analyze with sensor, reference method, data sheet. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for repeatability, error, placement or drift evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Protect sensors and cables. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Sensor-Ready Garden, including the evidence that triggers the decision.

DIAGNOSE & TEST

JSS 1-3 | Sensor-Ready Garden

Use scientific investigation to diagnose a question about sensor measurement quality. Quantify the response and defend a recommendation.

MISSION KIT sensor, reference method, data sheet

EVIDENCE repeatability, error, placement or drift evidence

GM-387 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Diagnose with sensor, reference method, data sheet. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for repeatability, error, placement or drift evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Protect sensors and cables. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Sensor-Ready Garden, including the evidence that triggers the decision.

SENSOR-READY SCIENCE MISSION

JSS 1-3 | Sensor-Ready Garden

Use scientific investigation to model a question about sensor measurement quality. Quantify the response and defend a recommendation.

MISSION KIT sensor, reference method, data sheet

EVIDENCE repeatability, error, placement or drift evidence

GM-388 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Model with sensor, reference method, data sheet. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for repeatability, error, placement or drift evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Protect sensors and cables. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Sensor-Ready Garden, including the evidence that triggers the decision.

EVALUATE THE EVIDENCE

JSS 1-3 | Sensor-Ready Garden

Use scientific investigation to evaluate a question about sensor measurement quality. Quantify the response and defend a recommendation.

MISSION KIT sensor, reference method, data sheet

EVIDENCE repeatability, error, placement or drift evidence

GM-389 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Evaluate with sensor, reference method, data sheet. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for repeatability, error, placement or drift evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Protect sensors and cables. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Sensor-Ready Garden, including the evidence that triggers the decision.

RECOMMEND & TEST

JSS 1-3 | Sensor-Ready Garden

Use scientific investigation to recommend a question about sensor measurement quality. Quantify the response and defend a recommendation.

MISSION KIT sensor, reference method, data sheet

EVIDENCE repeatability, error, placement or drift evidence

GM-390 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Recommend with sensor, reference method, data sheet. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for repeatability, error, placement or drift evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Protect sensors and cables. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Sensor-Ready Garden, including the evidence that triggers the decision.

DEFINE & TEST

JSS 1-3 | Applied Systems Garden

Use scientific investigation to define a question about whole-system relationships. Quantify the response and defend a recommendation.

MISSION KIT system map, records, calculator

EVIDENCE stock, flow, feedback, trade-off or scenario evidence

GM-391 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Define with system map, records, calculator. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for stock, flow, feedback, trade-off or scenario evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Define system boundary. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Applied Systems Garden, including the evidence that triggers the decision.

APPLIED SCIENCE MISSION

JSS 1-3 | Applied Systems Garden

Use scientific investigation to hypothesize a question about whole-system relationships. Quantify the response and defend a recommendation.

MISSION KIT system map, records, calculator

EVIDENCE stock, flow, feedback, trade-off or scenario evidence

GM-392 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Hypothesize with system map, records, calculator. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for stock, flow, feedback, trade-off or scenario evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Define system boundary. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Applied Systems Garden, including the evidence that triggers the decision.

DESIGN THE EVIDENCE

JSS 1-3 | Applied Systems Garden

Use scientific investigation to design a question about whole-system relationships. Quantify the response and defend a recommendation.

MISSION KIT system map, records, calculator

EVIDENCE stock, flow, feedback, trade-off or scenario evidence

GM-393 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Design with system map, records, calculator. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for stock, flow, feedback, trade-off or scenario evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Define system boundary. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Applied Systems Garden, including the evidence that triggers the decision.

REPLICATE & TEST

JSS 1-3 | Applied Systems Garden

Use scientific investigation to replicate a question about whole-system relationships. Quantify the response and defend a recommendation.

MISSION KIT system map, records, calculator

EVIDENCE stock, flow, feedback, trade-off or scenario evidence

GM-394 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Replicate with system map, records, calculator. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for stock, flow, feedback, trade-off or scenario evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Define system boundary. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Applied Systems Garden, including the evidence that triggers the decision.

APPLIED SCIENCE MISSION

JSS 1-3 | Applied Systems Garden

Use scientific investigation to quantify a question about whole-system relationships. Quantify the response and defend a recommendation.

MISSION KIT system map, records, calculator

EVIDENCE stock, flow, feedback, trade-off or scenario evidence

GM-395 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Quantify with system map, records, calculator. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for stock, flow, feedback, trade-off or scenario evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Define system boundary. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Applied Systems Garden, including the evidence that triggers the decision.

ANALYZE THE EVIDENCE

JSS 1-3 | Applied Systems Garden

Use scientific investigation to analyze a question about whole-system relationships. Quantify the response and defend a recommendation.

MISSION KIT system map, records, calculator

EVIDENCE stock, flow, feedback, trade-off or scenario evidence

GM-396 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Analyze with system map, records, calculator. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for stock, flow, feedback, trade-off or scenario evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Define system boundary. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Applied Systems Garden, including the evidence that triggers the decision.

DIAGNOSE & TEST

JSS 1-3 | Applied Systems Garden

Use scientific investigation to diagnose a question about whole-system relationships. Quantify the response and defend a recommendation.

MISSION KIT system map, records, calculator

EVIDENCE stock, flow, feedback, trade-off or scenario evidence

GM-397 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Diagnose with system map, records, calculator. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for stock, flow, feedback, trade-off or scenario evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Define system boundary. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Applied Systems Garden, including the evidence that triggers the decision.

APPLIED SCIENCE MISSION

JSS 1-3 | Applied Systems Garden

Use scientific investigation to model a question about whole-system relationships. Quantify the response and defend a recommendation.

MISSION KIT system map, records, calculator

EVIDENCE stock, flow, feedback, trade-off or scenario evidence

GM-398 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Model with system map, records, calculator. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for stock, flow, feedback, trade-off or scenario evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Define system boundary. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Applied Systems Garden, including the evidence that triggers the decision.

EVALUATE THE EVIDENCE

JSS 1-3 | Applied Systems Garden

Use scientific investigation to evaluate a question about whole-system relationships. Quantify the response and defend a recommendation.

MISSION KIT system map, records, calculator

EVIDENCE stock, flow, feedback, trade-off or scenario evidence

GM-399 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Evaluate with system map, records, calculator. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for stock, flow, feedback, trade-off or scenario evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Define system boundary. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Applied Systems Garden, including the evidence that triggers the decision.

RECOMMEND & TEST

JSS 1-3 | Applied Systems Garden

Use scientific investigation to recommend a question about whole-system relationships. Quantify the response and defend a recommendation.

MISSION KIT system map, records, calculator

EVIDENCE stock, flow, feedback, trade-off or scenario evidence

GM-400 - MISSION PATH

- DO** 1. Define the problem and hypothesis. 2. Specify variables, treatment/comparison and replicates. 3. Recommend with system map, records, calculator. 4. Quantify the response. 5. Analyze variation or effect. 6. Conclude and recommend.
- PROVE** Submit the experimental layout, raw-data table, calculation/graph and conclusion for stock, flow, feedback, trade-off or scenario evidence.
- SUCCESS** Variables and units are defined, evidence is traceable, analysis is appropriate, and the recommendation states uncertainty.
- SAFETY** Define system boundary. Follow teacher instructions and school garden safety rules.

AGRISHINE TASK

Translate the result into one management decision for the Applied Systems Garden, including the evidence that triggers the decision.
