

JSS 1-3 Raised Systems Garden Flashcards 621-640

621. RAISED SYSTEM	A raised growing system is an engineered production space in which the root zone...
622. BED GEOMETRY	Bed geometry determines surface area, soil volume, access, drainage pathways, an...
623. ROOT-ZONE VOLUME	Root-zone volume is the three-dimensional growing space available for roots and ...
624. SOIL BULK CONDITION	Compaction and structure influence pore space, infiltration, aeration, rooting, ...
625. INFILTRATION	Infiltration rate describes how quickly water enters the soil surface under spec...
626. DRAINAGE	Drainage removes excess water from the root zone and influences aeration and roo...
627. WATER-HOLDING CAPACITY	Water-holding capacity describes the soil's ability to retain water after excess...
628. SOIL AMENDMENT	An amendment is a material added to soil to modify physical, chemical, or biolog...
629. COMPOST RATE	Application rate expresses the amount of compost or amendment applied per unit a...
630. PLANTING CONFIGURATION	Planting configuration combines row arrangement, spacing, crop architecture, and...
631. EDGE EFFECT	Plants near bed boundaries may experience different moisture, temperature, light...
632. MULCH DEPTH	Mulch depth influences soil cover, evaporation suppression, weed emergence, and ...
633. ROOT-ZONE MOISTURE	Moisture can vary horizontally and vertically within a raised bed.
634. BED TEMPERATURE	Root-zone temperature can vary with depth, cover, water content, and exposure.
635. CROP RESPONSE	Crop response is a measurable change in growth, condition, or yield associated w...
636. MAINTENANCE	Raised systems require structural, soil, irrigation, weed, sanitation, and acces...
637. SYSTEM CAPACITY	System capacity describes how much growing area, root volume, plant population, ...
638. RESOURCE USE	Raised-system management can be evaluated by relating water, amendments, labor, ...
639. SYSTEM LIMITATION	A limitation is a structural, biological, or operational factor that constrains ...
640. RAISED SYSTEM EVALUATION	Evaluation uses measured evidence to judge design, root-zone condition, crop res...
