

SSS 1-3

FOOD SMART CHALLENGE SYSTEM

FSC-401 to FSC-500

FRAME -> ANALYZE -> MODEL -> OPTIMIZE -> RECOMMEND

Purpose	Move learners from knowing facts to making evidence-based food, ingredient, resource and waste decisions.
Ten domains	Ingredients; food journeys; food choices; labels; meals; water; food waste; seasonality; storage/handling; food-system problem solving.
Evidence rule	Learners should show how they reached a decision. At higher levels, require data, criteria, uncertainty and trade-off reasoning.
Health/safety boundary	No medical or therapeutic claims. No tasting is required. School food-safety and allergy procedures take priority.
Resource connections	Use vocabulary, Ingredient Lab, Farm-to-Food activities, journals, mission cards and GrowMeal assessments as evidence sources.

CHALLENGE SET 01 - REAL-WORLD FOOD SMART DECISIONS

This set contains one challenge from each Food Smart domain. Teachers may run them individually, as stations, or as a term challenge sequence.

FSC-401 - KNOW THE INGREDIENT

Scenario	A school food-system design team is evaluating a school garden. Your role is to frame and solve a know the ingredient challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-402 - BUILD A FOOD JOURNEY

Scenario	A school food-system design team is evaluating a classroom food table. Your role is to frame and solve a build a food journey challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-403 - MAKE A FOOD CHOICE

Scenario	A school food-system design team is evaluating a harvest basket. Your role is to frame and solve a make a food choice challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-404 - READ THE LABEL

Scenario	A school food-system design team is evaluating a ingredient display. Your role is to frame and solve a read the label challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-405 - PLAN A MEAL

Scenario	A school food-system design team is evaluating a school lunch scenario. Your role is to frame and solve a plan a meal challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-406 - USE WATER WISELY

Scenario	A school food-system design team is evaluating a water station. Your role is to frame and solve a use water wisely challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-407 - REDUCE FOOD WASTE

Scenario	A school food-system design team is evaluating a storage shelf. Your role is to frame and solve a reduce food waste challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-408 - THINK SEASONALLY

Scenario	A school food-system design team is evaluating a market basket. Your role is to frame and solve a think seasonally challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-409 - STORE & HANDLE RESPONSIBLY

Scenario	A school food-system design team is evaluating a food journey map. Your role is to frame and solve a store & handle responsibly challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-410 - SOLVE A FOOD-SYSTEM CHALLENGE

Scenario	A school food-system design team is evaluating a school food-waste station. Your role is to frame and solve a solve a food-system challenge challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

CHALLENGE SET 02 - REAL-WORLD FOOD SMART DECISIONS

This set contains one challenge from each Food Smart domain. Teachers may run them individually, as stations, or as a term challenge sequence.

FSC-411 - KNOW THE INGREDIENT

Scenario	A school food-system design team is evaluating a classroom food table. Your role is to frame and solve a know the ingredient challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-412 - BUILD A FOOD JOURNEY

Scenario	A school food-system design team is evaluating a harvest basket. Your role is to frame and solve a build a food journey challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-413 - MAKE A FOOD CHOICE

Scenario	A school food-system design team is evaluating a ingredient display. Your role is to frame and solve a make a food choice challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-414 - READ THE LABEL

Scenario	A school food-system design team is evaluating a school lunch scenario. Your role is to frame and solve a read the label challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-415 - PLAN A MEAL

Scenario	A school food-system design team is evaluating a water station. Your role is to frame and solve a plan a meal challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-416 - USE WATER WISELY

Scenario	A school food-system design team is evaluating a storage shelf. Your role is to frame and solve a use water wisely challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-417 - REDUCE FOOD WASTE

Scenario	A school food-system design team is evaluating a market basket. Your role is to frame and solve a reduce food waste challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-418 - THINK SEASONALLY

Scenario	A school food-system design team is evaluating a food journey map. Your role is to frame and solve a think seasonally challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-419 - STORE & HANDLE RESPONSIBLY

Scenario	A school food-system design team is evaluating a school food-waste station. Your role is to frame and solve a store & handle responsibly challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-420 - SOLVE A FOOD-SYSTEM CHALLENGE

Scenario	A school food-system design team is evaluating a school garden. Your role is to frame and solve a solve a food-system challenge challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

CHALLENGE SET 03 - REAL-WORLD FOOD SMART DECISIONS

This set contains one challenge from each Food Smart domain. Teachers may run them individually, as stations, or as a term challenge sequence.

FSC-421 - KNOW THE INGREDIENT

Scenario	A school food-system design team is evaluating a harvest basket. Your role is to frame and solve a know the ingredient challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-422 - BUILD A FOOD JOURNEY

Scenario	A school food-system design team is evaluating a ingredient display. Your role is to frame and solve a build a food journey challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-423 - MAKE A FOOD CHOICE

Scenario	A school food-system design team is evaluating a school lunch scenario. Your role is to frame and solve a make a food choice challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-424 - READ THE LABEL

Scenario	A school food-system design team is evaluating a water station. Your role is to frame and solve a read the label challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-425 - PLAN A MEAL

Scenario	A school food-system design team is evaluating a storage shelf. Your role is to frame and solve a plan a meal challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-426 - USE WATER WISELY

Scenario	A school food-system design team is evaluating a market basket. Your role is to frame and solve a use water wisely challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-427 - REDUCE FOOD WASTE

Scenario	A school food-system design team is evaluating a food journey map. Your role is to frame and solve a reduce food waste challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-428 - THINK SEASONALLY

Scenario	A school food-system design team is evaluating a school food-waste station. Your role is to frame and solve a think seasonally challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-429 - STORE & HANDLE RESPONSIBLY

Scenario	A school food-system design team is evaluating a school garden. Your role is to frame and solve a store & handle responsibly challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-430 - SOLVE A FOOD-SYSTEM CHALLENGE

Scenario	A school food-system design team is evaluating a classroom food table. Your role is to frame and solve a solve a food-system challenge challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

CHALLENGE SET 04 - REAL-WORLD FOOD SMART DECISIONS

This set contains one challenge from each Food Smart domain. Teachers may run them individually, as stations, or as a term challenge sequence.

FSC-431 - KNOW THE INGREDIENT

Scenario	A school food-system design team is evaluating a ingredient display. Your role is to frame and solve a know the ingredient challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-432 - BUILD A FOOD JOURNEY

Scenario	A school food-system design team is evaluating a school lunch scenario. Your role is to frame and solve a build a food journey challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-433 - MAKE A FOOD CHOICE

Scenario	A school food-system design team is evaluating a water station. Your role is to frame and solve a make a food choice challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-434 - READ THE LABEL

Scenario	A school food-system design team is evaluating a storage shelf. Your role is to frame and solve a read the label challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-435 - PLAN A MEAL

Scenario	A school food-system design team is evaluating a market basket. Your role is to frame and solve a plan a meal challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-436 - USE WATER WISELY

Scenario	A school food-system design team is evaluating a food journey map. Your role is to frame and solve a use water wisely challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-437 - REDUCE FOOD WASTE

Scenario	A school food-system design team is evaluating a school food-waste station. Your role is to frame and solve a reduce food waste challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-438 - THINK SEASONALLY

Scenario	A school food-system design team is evaluating a school garden. Your role is to frame and solve a think seasonally challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-439 - STORE & HANDLE RESPONSIBLY

Scenario	A school food-system design team is evaluating a classroom food table. Your role is to frame and solve a store & handle responsibly challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-440 - SOLVE A FOOD-SYSTEM CHALLENGE

Scenario	A school food-system design team is evaluating a harvest basket. Your role is to frame and solve a solve a food-system challenge challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

CHALLENGE SET 05 - REAL-WORLD FOOD SMART DECISIONS

This set contains one challenge from each Food Smart domain. Teachers may run them individually, as stations, or as a term challenge sequence.

FSC-441 - KNOW THE INGREDIENT

Scenario	A school food-system design team is evaluating a school lunch scenario. Your role is to frame and solve a know the ingredient challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-442 - BUILD A FOOD JOURNEY

Scenario	A school food-system design team is evaluating a water station. Your role is to frame and solve a build a food journey challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-443 - MAKE A FOOD CHOICE

Scenario	A school food-system design team is evaluating a storage shelf. Your role is to frame and solve a make a food choice challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-444 - READ THE LABEL

Scenario	A school food-system design team is evaluating a market basket. Your role is to frame and solve a read the label challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-445 - PLAN A MEAL

Scenario	A school food-system design team is evaluating a food journey map. Your role is to frame and solve a plan a meal challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-446 - USE WATER WISELY

Scenario	A school food-system design team is evaluating a school food-waste station. Your role is to frame and solve a use water wisely challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-447 - REDUCE FOOD WASTE

Scenario	A school food-system design team is evaluating a school garden. Your role is to frame and solve a reduce food waste challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-448 - THINK SEASONALLY

Scenario	A school food-system design team is evaluating a classroom food table. Your role is to frame and solve a think seasonally challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-449 - STORE & HANDLE RESPONSIBLY

Scenario	A school food-system design team is evaluating a harvest basket. Your role is to frame and solve a store & handle responsibly challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-450 - SOLVE A FOOD-SYSTEM CHALLENGE

Scenario	A school food-system design team is evaluating a ingredient display. Your role is to frame and solve a solve a food-system challenge challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

CHALLENGE SET 06 - REAL-WORLD FOOD SMART DECISIONS

This set contains one challenge from each Food Smart domain. Teachers may run them individually, as stations, or as a term challenge sequence.

FSC-451 - KNOW THE INGREDIENT

Scenario	A school food-system design team is evaluating a water station. Your role is to frame and solve a know the ingredient challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-452 - BUILD A FOOD JOURNEY

Scenario	A school food-system design team is evaluating a storage shelf. Your role is to frame and solve a build a food journey challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-453 - MAKE A FOOD CHOICE

Scenario	A school food-system design team is evaluating a market basket. Your role is to frame and solve a make a food choice challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-454 - READ THE LABEL

Scenario	A school food-system design team is evaluating a food journey map. Your role is to frame and solve a read the label challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-455 - PLAN A MEAL

Scenario	A school food-system design team is evaluating a school food-waste station. Your role is to frame and solve a plan a meal challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-456 - USE WATER WISELY

Scenario	A school food-system design team is evaluating a school garden. Your role is to frame and solve a use water wisely challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-457 - REDUCE FOOD WASTE

Scenario	A school food-system design team is evaluating a classroom food table. Your role is to frame and solve a reduce food waste challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-458 - THINK SEASONALLY

Scenario	A school food-system design team is evaluating a harvest basket. Your role is to frame and solve a think seasonally challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-459 - STORE & HANDLE RESPONSIBLY

Scenario	A school food-system design team is evaluating a ingredient display. Your role is to frame and solve a store & handle responsibly challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-460 - SOLVE A FOOD-SYSTEM CHALLENGE

Scenario	A school food-system design team is evaluating a school lunch scenario. Your role is to frame and solve a solve a food-system challenge challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

CHALLENGE SET 07 - REAL-WORLD FOOD SMART DECISIONS

This set contains one challenge from each Food Smart domain. Teachers may run them individually, as stations, or as a term challenge sequence.

FSC-461 - KNOW THE INGREDIENT

Scenario	A school food-system design team is evaluating a storage shelf. Your role is to frame and solve a know the ingredient challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-462 - BUILD A FOOD JOURNEY

Scenario	A school food-system design team is evaluating a market basket. Your role is to frame and solve a build a food journey challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-463 - MAKE A FOOD CHOICE

Scenario	A school food-system design team is evaluating a food journey map. Your role is to frame and solve a make a food choice challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-464 - READ THE LABEL

Scenario	A school food-system design team is evaluating a school food-waste station. Your role is to frame and solve a read the label challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-465 - PLAN A MEAL

Scenario	A school food-system design team is evaluating a school garden. Your role is to frame and solve a plan a meal challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-466 - USE WATER WISELY

Scenario	A school food-system design team is evaluating a classroom food table. Your role is to frame and solve a use water wisely challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-467 - REDUCE FOOD WASTE

Scenario	A school food-system design team is evaluating a harvest basket. Your role is to frame and solve a reduce food waste challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-468 - THINK SEASONALLY

Scenario	A school food-system design team is evaluating a ingredient display. Your role is to frame and solve a think seasonally challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-469 - STORE & HANDLE RESPONSIBLY

Scenario	A school food-system design team is evaluating a school lunch scenario. Your role is to frame and solve a store & handle responsibly challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-470 - SOLVE A FOOD-SYSTEM CHALLENGE

Scenario	A school food-system design team is evaluating a water station. Your role is to frame and solve a solve a food-system challenge challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

CHALLENGE SET 08 - REAL-WORLD FOOD SMART DECISIONS

This set contains one challenge from each Food Smart domain. Teachers may run them individually, as stations, or as a term challenge sequence.

FSC-471 - KNOW THE INGREDIENT

Scenario	A school food-system design team is evaluating a market basket. Your role is to frame and solve a know the ingredient challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-472 - BUILD A FOOD JOURNEY

Scenario	A school food-system design team is evaluating a food journey map. Your role is to frame and solve a build a food journey challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-473 - MAKE A FOOD CHOICE

Scenario	A school food-system design team is evaluating a school food-waste station. Your role is to frame and solve a make a food choice challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-474 - READ THE LABEL

Scenario	A school food-system design team is evaluating a school garden. Your role is to frame and solve a read the label challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-475 - PLAN A MEAL

Scenario	A school food-system design team is evaluating a classroom food table. Your role is to frame and solve a plan a meal challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-476 - USE WATER WISELY

Scenario	A school food-system design team is evaluating a harvest basket. Your role is to frame and solve a use water wisely challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-477 - REDUCE FOOD WASTE

Scenario	A school food-system design team is evaluating a ingredient display. Your role is to frame and solve a reduce food waste challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-478 - THINK SEASONALLY

Scenario	A school food-system design team is evaluating a school lunch scenario. Your role is to frame and solve a think seasonally challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-479 - STORE & HANDLE RESPONSIBLY

Scenario	A school food-system design team is evaluating a water station. Your role is to frame and solve a store & handle responsibly challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-480 - SOLVE A FOOD-SYSTEM CHALLENGE

Scenario	A school food-system design team is evaluating a storage shelf. Your role is to frame and solve a solve a food-system challenge challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

CHALLENGE SET 09 - REAL-WORLD FOOD SMART DECISIONS

This set contains one challenge from each Food Smart domain. Teachers may run them individually, as stations, or as a term challenge sequence.

FSC-481 - KNOW THE INGREDIENT

Scenario	A school food-system design team is evaluating a food journey map. Your role is to frame and solve a know the ingredient challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-482 - BUILD A FOOD JOURNEY

Scenario	A school food-system design team is evaluating a school food-waste station. Your role is to frame and solve a build a food journey challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-483 - MAKE A FOOD CHOICE

Scenario	A school food-system design team is evaluating a school garden. Your role is to frame and solve a make a food choice challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-484 - READ THE LABEL

Scenario	A school food-system design team is evaluating a classroom food table. Your role is to frame and solve a read the label challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-485 - PLAN A MEAL

Scenario	A school food-system design team is evaluating a harvest basket. Your role is to frame and solve a plan a meal challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-486 - USE WATER WISELY

Scenario	A school food-system design team is evaluating a ingredient display. Your role is to frame and solve a use water wisely challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-487 - REDUCE FOOD WASTE

Scenario	A school food-system design team is evaluating a school lunch scenario. Your role is to frame and solve a reduce food waste challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-488 - THINK SEASONALLY

Scenario	A school food-system design team is evaluating a water station. Your role is to frame and solve a think seasonally challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-489 - STORE & HANDLE RESPONSIBLY

Scenario	A school food-system design team is evaluating a storage shelf. Your role is to frame and solve a store & handle responsibly challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-490 - SOLVE A FOOD-SYSTEM CHALLENGE

Scenario	A school food-system design team is evaluating a market basket. Your role is to frame and solve a solve a food-system challenge challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

CHALLENGE SET 10 - REAL-WORLD FOOD SMART DECISIONS

This set contains one challenge from each Food Smart domain. Teachers may run them individually, as stations, or as a term challenge sequence.

FSC-491 - KNOW THE INGREDIENT

Scenario	A school food-system design team is evaluating a school food-waste station. Your role is to frame and solve a know the ingredient challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-492 - BUILD A FOOD JOURNEY

Scenario	A school food-system design team is evaluating a school garden. Your role is to frame and solve a build a food journey challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-493 - MAKE A FOOD CHOICE

Scenario	A school food-system design team is evaluating a classroom food table. Your role is to frame and solve a make a food choice challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-494 - READ THE LABEL

Scenario	A school food-system design team is evaluating a harvest basket. Your role is to frame and solve a read the label challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-495 - PLAN A MEAL

Scenario	A school food-system design team is evaluating a ingredient display. Your role is to frame and solve a plan a meal challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-496 - USE WATER WISELY

Scenario	A school food-system design team is evaluating a school lunch scenario. Your role is to frame and solve a use water wisely challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-497 - REDUCE FOOD WASTE

Scenario	A school food-system design team is evaluating a water station. Your role is to frame and solve a reduce food waste challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-498 - THINK SEASONALLY

Scenario	A school food-system design team is evaluating a storage shelf. Your role is to frame and solve a think seasonally challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-499 - STORE & HANDLE RESPONSIBLY

Scenario	A school food-system design team is evaluating a market basket. Your role is to frame and solve a store & handle responsibly challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____

FSC-500 - SOLVE A FOOD-SYSTEM CHALLENGE

Scenario	A school food-system design team is evaluating a food journey map. Your role is to frame and solve a solve a food-system challenge challenge under performance, resource and safety constraints.
Your challenge	Define system boundary, objective and constraints; establish indicators; compare scenarios; quantify a performance metric; identify trade-offs and uncertainty; recommend an optimized or robust option with acceptance criteria.
Evidence to submit	System/process map, metric or model, scenario comparison, uncertainty/trade-off analysis and recommendation.
Success criteria	Clear objective; valid indicators; reproducible reasoning; constraints respected; recommendation tied to measurable acceptance criteria.
Extension	Design a pilot test, monitoring plan or decision rule to validate the recommendation.
Safety	Use only teacher-approved materials. No tasting is required. Follow school rules for food handling, allergies, handwashing and sanitation. Teachers control knives, heat, electrical equipment, chemicals and processing machinery.
AgriShine connection	Use a garden observation, crop/ingredient example, practical result or journal record wherever it strengthens the decision.
Assessment connection	Score primarily under mission-based problem solving, with supporting knowledge, practical or investigation/data evidence as appropriate.

Decision: _____

Evidence/reason: _____
